

ABSTRACT OF THE DISCLOSURE

A color-image forming device is provided with:
a color-image forming unit for forming a color image by
superimposing a plurality of images corresponding to a
5 plurality of colors onto a recording medium. An
automatic color-drift correction executes color-drift
correction of color drift generated during the
superimposition of the images. A color-drift correction
execution interval setting unit variably sets the color-
10 drift correction execution intervals, at which intervals
the automatic color-drift correction executes the color-
drift correction. The functions of the automatic color-
drift correction and the color-drift correction
execution interval setting unit are realized by the
15 system control unit.
